

SciencePoles : the scientific website of the International Polar Foundation (IPF)

SciencePoles aims to provide an overview of polar science and research findings and highlight recent and forthcoming developments across a range of polar scientific disciplines all over the world.

SciencePoles, launched in June 2005:

- presents the results of polar and related climate change science in straightforward, lively and accurate language with a view to conveying, to as wide an audience as possible:
 - the “essentials” of polar science and research on a range of topics/fields: Why the Poles are Important, Arctic-Antarctic differences, Air, Earth, Ice, Water, Flora & Fauna, Climate Change, the Human Dimension, Technologies
 - news of and articles about discoveries and recent research as well as related topics: eg IPY 2007-08 and research support infrastructure (Vessels, Ships etc)
- provides a calendar of significant events taking place in polar science and research

If you want to be updated with upcoming events about polar science and climate change you can visit www.sciencepoles.org.

If you wish to be involved and to contribute draft material please contact:
